University of Mumbai

No. AAMS_UGS/ICC/2022-23/ \ \ O

CIRCULAR :-

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Faculty of Science & Technology is invited to this office circular No. UG/133 of 2016-17 dated 09th November, 2016 relating to the revised syllabus of M.E.(Civil Engineering) Construction Engineering and Management (CEM) (Sem. -1 & IV) (CBCS).

They are hereby informed that the recommendations made by the Board of Studies in Civil Engineering at its meeting held on 06th June, 2022 and subsequently passed in the Faculty and then by the Board of Deans at its meeting held on 5th July, 2022 vide item No. 6.19 (R) have been accepted by the Academic Council at its meeting held on 11th July, 2022 vide item No. 6.19 (R) and that in accordance therewith, the revised syllabus of M.E. (Construction Engineering and Management) (Sem. - I to IV) (CBCS) (REV-2022 Scheme) has been brought into force with effect from the academic year 2022-23. (The circular is available on the University's website www.mu.ac.in).

MUMBAI - 400 032 20th October, 2022

(Dr. Shailendra Deolankar) I/c Registrar

The Principals of the Affiliated Colleges and Directors of the recognized Institutions in To Faculty of Science & Technology.

A.C/6.19(R)/11/07/2022

No. AAMS_UGS/ICC/ 2022-23/ \ \ O

of October, 2022

Copy forwarded with Compliments for information to:-

- 1) The Dean, Faculty of Science & Technology,
- 2) The Chairman, Board of Studies in Civil Engineering,
- 3) The Director, Board of Examinations and Evaluation,
- 4) The Director, Board of Students Development,
- 5) The Director, Department of Information & Communication Technology,
- 6) The Co-ordinator, MKCL.

(Dr. Shailendra Deolankar) I/c Registrar

Copy for information and necessary action :-

- 1. The Deputy Registrar, College Affiliations & Development Department (CAD),
- 2. College Teachers Approval Unit (CTA),
- 3. The Deputy Registrar, (Admissions, Enrolment, Eligibility and Migration Department (AEM),
- 4. The Deputy Registrar, Academic Appointments & Quality Assurance (AAQA)
- 5. The Deputy Registrar, Research Administration & Promotion Cell (RAPC),
- 6. The Deputy Registrar, Executive Authorities Section (EA)
 He is requested to treat this as action taken report on the concerned resolution adopted by the Academic Council referred to the above circular.
- 7. The Deputy Registrar, PRO, Fort, (Publication Section),
- 8. The Deputy Registrar, Special Cell,
- 9. The Deputy Registrar, Fort Administration Department (FAD) Record Section,
- 10. The Deputy Registrar, Vidyanagari Administration Department (VAD),

Copy for information:-

- 1. The Director, Dept. of Information and Communication Technology (DICT), Vidyanagari,
 - He is requested to upload the Circular University Website
- 2. The Director of Department of Student Development (DSD),
- 3. The Director, Institute of Distance and Open Learning (IDOL Admin), Vidyanagari,
- 4. All Deputy Registrar, Examination House,
- 5. The Deputy Registrars, Finance & Accounts Section,
- 6. The Assistant Registrar, Administrative sub-Campus Thane,
- 7. The Assistant Registrar, School of Engg. & Applied Sciences, Kalyan,
- 8. The Assistant Registrar, Ratnagiri sub-centre, Ratnagiri,
- 9. P.A to Hon'ble Vice-Chancellor,
- 10. P.A to Pro-Vice-Chancellor,
- 11. P.A to Registrar,
- 12. P.A to All Deans of all Faculties,
- 13. P.A to Finance & Account Officers, (F & A.O),
- 14. P.A to Director, Board of Examinations and Evaluation,
- 15. P.A to Director, Innovation, Incubation and Linkages,
- 16. P.A to Director, Department of Lifelong Learning and Extension (DLLE),
- 17. The Receptionist,
- 18. The Telephone Operator,

Copy with compliments for information to :-

- 19. The Secretary, MUASA
- 20. The Secretary, BUCTU.

University of Mumbai

Revised Syllabus for

M.E. (Construction Engineering & Management)

(Sem. - I to IV)

(Choice Based Credit System)

(With effect from the academic year 2022-23)

University of Mumbai

O: Title of Course	M.E. (Construction Engineering &
	Management)
O: Eligibility	Passed B.E./B.Tech and as per the Ordinance 5134
R: Passing Marks	45%
No. of years/Semesters:	2 years / 4 semesters
Level:	P.G. / U.G./ Diploma / Certificate
Pattern:	Yearly / Semester
Status:	New / Revised 2022
To be implemented from Academic Year :	With effect from Academic Year : 2022-23

Dr. Suresh K. Ukarande Chairman, Board of Studies,

Dr. Suresh K. Ukarande Associate Dean, Faculty of Science and **Technology University** Faculty of Technology of Mumbai

Hayumda Dr Anuradha Majumdar Dean, Faculty of Science and Technology University of Mumbai

Note 2: It is mandatory to complete the Online Credit Courses (OCC) available on NPTEL / Swayam /MOOC or similar platform approved by UoM. These two courses shall be completed in any semester I or II or III, but not later than end of the Semester III. University shall make a provision that credits earned with OCC- I and OCC-II shall be accounted in the third semester grade-sheet with actual names of courses. The learner shall be allowed to take up these courses from his or her institute or organisation/ industry where his / her major project is carried out. The students shall complete the courses and shall qualify the exam conducted by the respective authorities/ instructor from the platform. The fees for any such courses and the corresponding examination shall be borne by the learner.

Online Credit Course - I

The learner shall opt for the course in the domain of Research Methodology **or** Research & Publication Ethicsor IPR. The opted course shall be of 3 credits of equivalent number of weeks.

Online Credit Course -II

The learner shall opt for the course recommended by Faculty Advisor/ Project Supervisor from the institute. The opted course shall be of 3 credits of equivalent number of weeks.

CEMMP401	Major Project: Dissertation - II						100	100	200
	Total 100 100							200	

Total Credits: 68

Note 3:The Dissertation -II submission shall not be permitted till thelearner completes all the requirements of ME course.

Note 4: The contact hours for the calculation of load of the teacher for Major Project are as follows: Major Project Dissertation I and II - 02 Hour / week / student

Guidelines for Dissertation-I

Students should do literature survey and identify the problem for Dissertation and finalize in consultation with Guide/Supervisor. Students should use multiple literature and understand the problem. Students should attempt solution to the problem by analytical/simulation/experimental methods. The solution to be validated with proper justification and compile the report in standard format. Guidelines for Assessment of Dissertation-I.

Dissertation-I should be assessed based on following points

- Quality of Literature survey and Novelty in the problem
- Clarity of Problem definition and Feasibility of problem solution
- Relevance to the specialization
- Clarity of objective and scope of Dissertation-I should be assessed through a presentation by a panel of Internal examiners and external examiner appointed by the Head of the Department/Institute of respective Program.

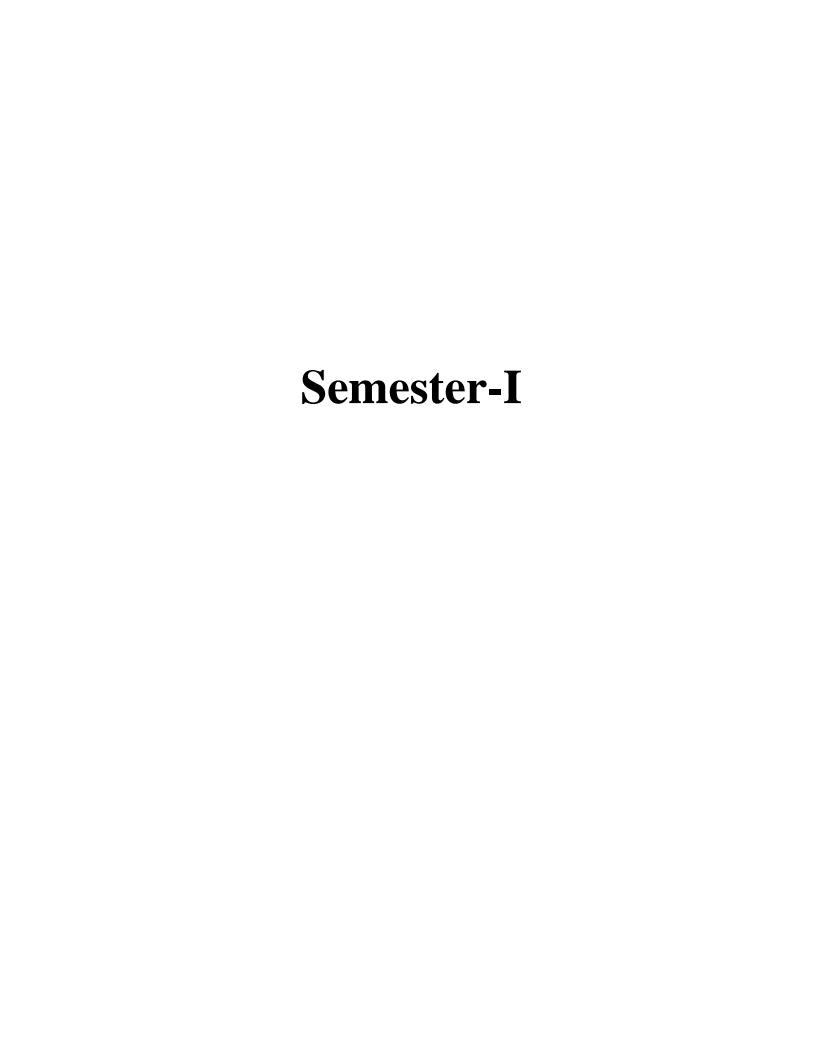

Guidelines for Assessment of Dissertation II

Dissertation II should be assessed based on following points:

- Quality of Literature survey and Novelty in the problem
- Clarity of Problem definition and Feasibility of problem solution
- Relevance to the specialization or current Research / Industrial trends
- Clarity of objective and scope
- Quality of work attempted or learner contribution
- Validation of results
- Quality of Written and Oral Presentation

Students should publish at least one Research paper based on the work in referred National / International conference/Journal of repute.

Dissertation II should be assessed by Internal and External Examiners appointed by the University of Mumbai.

- Develop a basic understanding of probability concepts including: events, sample space, set theory, conditional probability, theory of total probability, Bayes' theory and indicating their application in civil engineering through solving different types of examples and problems.
- Understand different types of distribution functions and explore their applications in civil engineering.
- Derive meaningful statistical inferences from available data
- Co-relate the data set and hence establish inter-relationships between parameters and establish regression relationships
- Simulate existing/historical data for predicting futuristic characteristics.
- Apply various mathematical tools to optimize construction processes

DetailedSyllabus					
Module	Sub-Modules/Contents	Hrs			
	Probability				
I	1.1 Probability theory and its importance in construction processes.	10			
	1.2 Definition of probability, Rules of Probability, Casualty v/s				
	Randomness, Conditional probability, Total Probability, Baye's theorem,				
	Combined experiments, Independence, Problems on the above.				
	1.3 Random variable concept and its application				
	Concept of Theoretical probability Distributions with special focus on application of Binomial, Poissons and Normal Distribution to construction				
	project management				
	Sampling				
II	2.1 Probability and non-probability samples, Random sampling, other sampling schemes and their applications to construction industry	06			

	2.2 Application of measures of dispersion to construction industry - concepts of range, mean, coefficient of range, standard deviation, variance, coefficient of variance in quality control of concreting, cost control of projects and similar such activities.	
	Correlation Analysis:	05
III	3.1 Correlation types, coefficients, Scatter Diagram 3.2 Application of Karl Pearson's correlation analysis to establish interrelationship between various concrete parameters and similar civil engineering activities	US
	3.3 Application of Spearman's Rank Co-relation analysis in project management and performance appraisal of human resource	
IV	Regression Analysis 4.1 Regression and Multivariate Analysis, 4.2 Multiple Linear Regression Analysis 4.3 Use of regression analysis in resources management and prediction of	03
	concrete parameters.	
	Modeling	09
V	 5.1 Use of mathematical models based on probabilistic and statistical methods 5.2. EOQ in civil engineering, problem on frequency of ordering cement bags for infrastructure projects 5.3.Griffi's waiting line model for sizing-matching of construction 	
	equipment 5.4 Vendor Rating Indexes based on past performance of suppliers 5.5 Mathematical models for equipment downtime analysis	
	Simulation	06
VI	 6.1 Simulation – Types, applications 6.2 Simulation in risk identification, analysis and mitigation of project risks 6.3 Numerical on predicting cost of future project 6.4 Simulation of waiting line model (analysis of waiting times of arrivals 	
	and idle times of servicing units)	

Learners will be able to

- Apply probability theories to construction processes
- Draw meaningful inferences from qualitative and quantitative data using measures of dispersion
- Establish Correlation co-efficient between various civil engineering parameters
- Develop linear regression equation between various civil engineering parameters
- Apply mathematical models to construction processes/systems, so the maximum output from a particular input may be obtained
- Simulate the performance of a particular system, based on past data/performance

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in

question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carries equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Recommended books:

- 1. Probability and Statistics for Engineers –Miller, Freund-Hall, Prentice India Ltd.
- 2. Applied Mathematics for Engineers and Physicists-pipes and Harvill. McGraw Hill International Edition.
- 3. Sampling techniques-Cochran, Wiley Series.
- 4. Statistics-Concepts and Controversies-David S. Moore-Freeman Company, New York.
- 5. Reliability Principles and practices-Calabro-McGraw Hill Book Company.
- 6. Applied Statistics and Probability for Engineers---Montgomery and Runger Wiley, India.
- 7. Shrivastava, Shenoy & Sharma, Quantitative Techniques for Managerial Decisions, Wiley
- 8. Applied Statistics for Civil and Environmental Engineers by Kottegoda. Stratford Books
- 9. Probability, Random Variables and Stochastic Process, Third Edition, Athanasius Papoulis, Third Edition, McGraw-Hill, Inc

- Explain management functions like planning, scheduling, executing & controlling the projects
- Describe the project management life cycle with various phases from project initiation through closure.
- Gain the Time management Knowledge of a project by proper scheduling using Networking Techniques
- Determine the best method of allocating resources to the projects by considering requirements & constraints associated with it.
- Understand the concept of updating & develop optimum relationship between time & cost for
- construction project
- Know the quality & safety measures to be adopted during the execution of Construction projects.

DetailedSyllabus				
Module	Sub-Modules/Contents	Hrs		
I	Basics of Project Management 1.1 Principles of management, Traditional management and modern scientific management. Theories of Frederick Taylor, Henry Fayol, Elton Mayo, McGregor, Abraham Maslow. 1.2 Definition of a Project, Project Vs Operations, Objectives & Functions of	04		
II	Project Management, Project management in various organization structures. Project Planning & Initiating 2.1 Stages of Planning in projects, Project life cycle, Role of Various agencies involved in Project. 2.2 Project Feasibilities Analysis, Project Selection Models, Project Appraisal Criterias.	06		

	2.3 Project sponsor and creating charter, Project proposal. Stages of team development & growth (forming, storming, norming & performing)	
	Project Scheduling	00
III	3.1 Introduction to Work Breakdown Structure (WBS) & Bar Chart Method, Project Network Terminologies.	08
	3.2 Project Scheduling using Network Techniques & Analysis- Critical Path	
	Method (CPM), Precedence Diagraming Method (PDM), PERT methods.	
	3.3 Application of MS-Project & Primavera Software for Project Scheduling.	
	Resource Management & Allocation	
IV	4.1 Material Management- Importance, objectives, functions of material management, Inventory control, A-B-C analysis, E.O.Q.	08
	4.2 Human Resource Management- Manpower planning, recruitment,	
	Selection training, performance evaluation of worker etc.	
	4.3 Resources Allocation Methods- Resource levelling & resource	
	smoothening	
T 7	Project Monitoring & Cost Control	
V	5.1 Monitoring and Control of project, Classification of Project costs, time	
	cost trade-off in projects, Project Network Crashing Examples	08
	5.2 Project Updating- Purpose of frequency of updating method of updating a	
	network.	
	5.3 Project Performance Evaluation using Earned Value Management (EVM)	
	techniques Project Quality & Safety Management	
VI	6.1 Project Quality Management: SQC charts, Sampling techniques, Quality	
	circles, ISO 9000, Management aspects.	05
	6.2 Safety in Projects: Safety Requirements, Safety and health codes,	
	Occupational diseases, Economic aspects, Management of accidents, Safety department	

After completion of course learners will be able to

- 1. Apply the knowledge of management functions like planning, scheduling, executing & controlling the projects
- 2. Explain the project management life cycle and various phases from project initiation through closure.
- 3. Demonstrate Time management of a project by proper scheduling using Networking Techniques
- 4. Select the best method of allocating resources to the projects by considering requirements & constraints associated with it.
- 5. Elaborate the concept of updating & develop optimum relationship between time & cost.
- **6.** Illustrate the quality & safety measures to be adopted during the execution of Construction projects

Assessment Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carries equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- To understand the tendering process in detail.
- To gain knowledge of standard & special types of construction contracts & the clauses & conditions associated with it.
- To get acquainted with the significance of Indian Contract Act & associated terms
- To understand the efficient methods for the resolving disputes arisen in contracting process

DetailedSyllabus				
Module	Sub-Modules/Contents	Hrs		
	Tendering Process	08		
	1.1 Tender – Definition, Types, Technical sanction Notice inviting Tenders,			
	Submission of tenders, Scrutinization process, Award, acceptance etc.			
I	1.2 Tender documents, Prequalification of bidders. Class & grade of			
	contractors etc.			
	1.3 Global Tenders			
	1.4 Bidding strategies			
	Contract & Contract documents	07		
	2.1 General & Special types of contracts			
II	2.2 Clauses & conditions of contract as per Ministry of statistics & program			
	Implementation			
	2.3 EPC Contracts			
	2.4 FIDIC Contracts			
	2.5 Contract Documents			
	Contract Management	00		
III	3.1 Role of specifications in contracting process	08		
	3.2 Termination of Contract & Breach of Contract			
	3.3 Indian Contract Act- 1872 with latest amendments			

	3.4 Sale of goods Act-1930 with new amendments	
	3.5 Professional ethics to be followed by Contracting Parties	
	Dispute Resolution	08
	4.1 Claims & disputes Standard methods of resolving disputes	
	4.2 Standard methods of resolving disputes	
IV	4.3 Dispute Resolution Board (DRB) – Necessity, formation,	
	Functioning, Advantages etc.	
	4.4 Arbitration & conciliation Act -1996 – Arbitration agreement, Arbitration	
	process, duties & powers of an arbitrator, rules of preparing evidences,	
	Publication of an award	
	Industrial Acts & Labor laws with latest amendments	04
	5.1 Indian Trade Union Act- 1926	
	5.2 Payment of Wages Act-1936	
${f V}$	5.3 Minimum Wages Act- 1948	
	5.4 Workmen's Compensation Act- 1923	
	5.5 Industrial Dispute Act - 1947	
	Bailment, Pledges, Indemnity & guarantee	04
VI	6.1 Definition of Bailment & Roles of agencies involved	
	6.2 Definition of Pledges & Roles of agencies involved	
	6.3 Indemnity & guarantee	

- Explain the basic procedure of bidding for construction projects.
- Demonstrate the all the types of contract along with their suitability in construction practices.
- Apply the knowledge of Indian Contract Act in construction Industry.
- Select appropriate method for resolving the disputes arisen
- Demonstrate the important terms associated with Indian Contract Act.
- Acquire knowledge of various terms such as Bailment, Pledges, Indemnity & guarantee

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question

- Describe an infrastructure system using accurate terminology
- Demonstrate an understanding of the main concepts and principles of infrastructure planning
- Identify the key features of a sustainable infrastructure system and explain how they promote sustainable development
- Apply analytical tools for infrastructure planning
- Critically evaluate infrastructure cases/projects/proposals through the lens of sustainability
- Identify the gaps between theoretical principles of sustainable infrastructure and their application in practices

Detailed Syllabus								
Module		Course Module / Contents						
	Intro	duction to planning						
		Origins and growth of cities, effects of cultural influence on						
	1.1	physical form; Human settlements as an expression of civilizations;						
I		Basic elements of the city; Concepts of space, time, scale of cities.	3					
1	1.2	Contribution of housing to micro and macro economy, contribution	3					
		to national wealth and GDP, housing taxation, national budgets,						
		fiscal concessions; need of affordable housing for urban poor,						
		concept of RERA						
	Urban Economics							
п	2.1	General introduction to principles of economics and public finance.	6					
11	2.1	Importance of economics in Urban Development and Planning						
	2.2	Industrial location policies, any other economic activity base						

policies and their impact on urban development, Role of land economics in preparation of Urban Development plans. Relevant case studies of Urban Land Economics. Economic growth and development, quality of life; Human development index, poverty and income distribution, employment and livelihood; Economic principles in land use planning; Policies and strategies in economic planning, balanced versus unbalanced growth, public sector dominance; changing economic policies, implications on land. Infrastructure Planning Role of Infrastructure in Development, Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms and standards, etc. Zoning, Various growth patterns of town, Housing layouts and road networks in town, Urban aesthetics and landscaping, MRTP and Land Acquisition Acts Planning and Management of Water, Drainage and Sanitation; Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Peasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; III Introduction to Drainage Problems in Different Climates: 14 Urbanization – Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning				
development index, poverty and income distribution, employment and livelihood; Economic principles in land use planning; Policies and strategies in economic planning, balanced versus unbalanced growth, public sector dominance; changing economic policies, implications on land. Infrastructure Planning Role of Infrastructure in Development, Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms and standards, etc. Zoning, Various growth patterns of town, Housing layouts and road networks in town, Urban aesthetics and landscaping, MRTP and Land Acquisition Acts Planning and Management of Water, Drainage and Sanitation; Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: 3.3 Urbanization – Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan: Objectives of urban drainage and planning criteria, Drainage options and system layout, Planning tools and data requirement, Drainage structures, Case studies Sanitation			economics in preparation of Urban Development plans. Relevant case studies of Urban Land Economics.	
Infrastructure Planning Role of Infrastructure in Development, Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms and standards, etc. Zoning, Various growth patterns of town, Housing layouts and road networks in town, Urban aesthetics and landscaping, MRTP and Land Acquisition Acts Planning and Management of Water, Drainage and Sanitation; Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water - sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: 3.3 Urbanization - Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan. Objectives of urban drainage and planning criteria, Drainage options and system layout, Planning tools and data requirement, Drainage structures, Case studies Sanitation - points of generation, collection, treatment, disposal, norms and standards, grey water disposal, institutional arrangements, planning provisions and management issues. Storm water - rainfall data interpretation, points of water stagnation, system of natural drains, surf		2.3	development index, poverty and income distribution, employment and livelihood; Economic principles in land use planning; Policies and strategies in economic planning, balanced versus unbalanced growth, public sector dominance; changing economic policies,	
Role of Infrastructure in Development, Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms and standards, etc. Zoning, Various growth patterns of town, Housing layouts and road networks in town, Urban aesthetics and landscaping, MRTP and Land Acquisition Acts Planning and Management of Water, Drainage and Sanitation; Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: Urbanization – Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan. Objectives of urban drainage and planning criteria, Drainage structures, Case studies Sanitation – points of generation, collection, treatment, disposal, norms and standards, grey water disposal, institutional arrangements, planning provisions and management issues. Storm water – rainfall data interpretation, points of water stagnation, system of natural drains, surface topography and soil characteristics, ground water replenishment, storm water collection and disposal, norms		Infra	1 -	
networks in town, Urban aesthetics and landscaping, MRTP and Land Acquisition Acts Planning and Management of Water, Drainage and Sanitation; Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: Urbanization – Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan: Objectives of urban drainage and planning criteria, Drainage options and system layout, Planning tools and data requirement, Drainage structures, Case studies Sanitation – points of generation, collection, treatment, disposal, norms and standards, grey water disposal, institutional arrangements, planning provisions and management issues. Storm water – rainfall data interpretation, points of water stagnation, system of natural drains, surface topography and soil characteristics, ground water replenishment, storm water collection and disposal, norms and standards, institutional arrangements, planning provisions and management issues; 3.4 Solid Waste Disposal and Management Basic principles, generation, characteristics, collection, disposal, management			Role of Infrastructure in Development, Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms	
Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: 1.3.3 Urbanization - Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan: Objectives of urban drainage and planning criteria, Drainage options and system layout, Planning tools and data requirement, Drainage structures, Case studies Sanitation – points of generation, collection, treatment, disposal, norms and standards, grey water disposal, institutional arrangements, planning provisions and management issues. Storm water – rainfall data interpretation, points of water stagnation, system of natural drains, surface topography and soil characteristics, ground water replenishment, storm water collection and disposal, norms and standards, institutional arrangements, planning provisions and management issues; Solid Waste Disposal and Management Basic principles, generation, characteristics, collection, disposal, management		3.2	networks in town, Urban aesthetics and landscaping, MRTP and	
generation, characteristics, collection, disposal, management	III	3.3	Urban Water Demand- Basic requirements for water supply, drainage and sanitation; Present and future demand for Indian cities, Estimation and fulfillment Feasibility and Case studies Administrative and Legal Aspects and Financing: International, national and municipal legal aspects, Administrative structure for drainage planning, Financing for drainage projects, Case studies Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Introduction to Drainage Problems in Different Climates: Urbanization - Its effects and consequences for drainage, Interaction between urban and peri-urban areas. Planning concepts and System Planning, Drainage Master Plan: Objectives of urban drainage and planning criteria, Drainage options and system layout, Planning tools and data requirement, Drainage structures, Case studies Sanitation – points of generation, collection, treatment, disposal, norms and standards, grey water disposal, institutional arrangements, planning provisions and management issues. Storm water – rainfall data interpretation, points of water stagnation, system of natural drains, surface topography and soil characteristics, ground water replenishment, storm water collection and disposal, norms and standards, institutional arrangements, planning provisions and management issues;	14
			generation, characteristics, collection, disposal, management	

		protection, services and space standards, location criteria; Planning	
		for Education, health, civic, cultural infrastructure and facilities for	
		transport and other miscellaneous infrastructure services	
		Planning for Education, health, civic, cultural infrastructure and	
	26	facilities for transport and other miscellaneous infrastructure

VI	6.1	international and national agencies and legislation,	4
		Environment Impact Assessment. Urban Heat Island Effect, Effect	
		of uncontrolled growth of town	
	6.2	Disaster response planning, roles and responsibilities of various	
	0.2	Disaster response praining, roles and responsibilities of various	

	agencies Emergency operation support and management Planning	
	for Disaster Prone Areas, Planning requisites for disaster prone	
	areas and preventive measures, Vulnerability analysis	

On completion of this course, the learners will be able to:

- Explain the concepts related to planning of modern cities, GDP contribution, RERA, affordable housing
- Elaborate the economics involved in urban infrastructure planning
- Envisage the various elements required for infrastructure development of a city and describe the concepts, significance and importance of each
- Evaluate technical, social and economic feasibility of transportation projects within cities
- Demonstrate modern tool usage for urban management and governance
- Design environmentally safe and disaster resilient infrastructure

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- To understand the concept of value & its application in engineering.
- To gain knowledge of value engineering job plan & the phases involved in it.
- To know function analysis & the techniques of analysis.
- To understand the concept of creativity & the processes associated with it.

		DetailedSyllabus				
Module		Sub-Modules/Contents	Hrs			
	Val	ue				
I.	1.1 Value: Meaning of value, basic and secondary functions. factor contributing to value such as aesthetic, ergonomic, technical, economic etc.					
	1.2	Difference between value engineering, value analysis & value management				
	1.3	Habits, roadblocks, attitudes & their relevance in value engineering				
	Value Engineering Job Plan					
II.	2.1	Definition & Terms related to Value Engineering Job Plan	04			
	2.2	Phases involved in job plan.				
	Fun	ction Analysis				
III.	3.1	Function- Definition, Role of function in achieving value	07			
-	3.2	Types of function				
	3.3	Function Analysis System Techniques (FAST)				
	Cre	ative Thinking				

IV.	4.1 Creative Thinking- Definition & Concept	
	4.2 Characteristics of Creative people	07
	4.3 Creative processes	
	4.4 Conducting creative sessions	
	Value Analysis	
V.	5.1 Definition & Principles of value analysis.	0.7
	5.2 Benefits & applications of value analysis	07
¥7 ¥	Case study	0.4
VI.	6.1 Case Study of application of Value Engineering & Value Analysis	04

Oncompletion of the course, the learners will be able to:

- Describe the concept of Value & its significance
- Organize various phases of Value Engineering Job Plan
- Gain knowledge of Function Analysis
- Develop various creative Processes
- Apply value analysis in Construction Practices
- Gain the knowledge of actual studies of Value Engineering

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carries equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

RecommendedBooks:

- To understand the concept and process of urban transportation planning.
- To acquaint with the stages involved in urban transportation planning process.
- To analyze the various methods of trip generation & distribution.
- To study various modal split models.
- To understand various network algorithms used for traffic assignment.
- To familiarize with the emerging trends in urban transportation planning.

Detailed Syllabus					
Module	Sub-Modules/ Contents	Hrs			
I	Introduction to Urban Transportation Planning Urbanization, Urban Transportation: Impacts, Behavioral Changes, Urban Transportation problems & Externalities- Congestion, Safety, Emissions, etc. Introduction to Transport planning; Transport Planning Morphology: Problem definition, Solution generation, solution analysis, Evaluation and choice, Implementation Hierarchical levels of Urban Transport Planning: Conceptual Plan, Outline plan, Master plans, statutory or advisory plans, detailed development plans.	06			
11	Stages involved in Urban Transportation Planning Process				
II	Overview of traditional four step travel demand forecasting process: Urban Activity forecasts, Trip generation, Trip Distribution, Mode Choice, Traffic	06			

	assignment Specification, Calibration, Validation and Forecasting; Information needs for Travel Demand Forecasting: Study Area, Urban Activities, Zoning, Urban Activities, Transportation System, Travel information, Types of Movements Data Collection Techniques (Home-interview survey, Commercial vehicle survey, Innovative Commercial Vehicle Tracking Methods, Intermediate Public Transport Survey, Cordon-Line Survey, License Plate Follow-Up Survey.	
	Trip Generation & Distribution	
III	Trip Generation: Basic considerations in trip generation - amount of urban activity, character of urban activity, other considerations, special generators; Trip classification; Factors affecting trip generation Methods of trip Generation-Regression analysis, trip rate analysis, cross classification analysis; Multiple Linear Regression-Regression analysis concept; The step wise approach with examples Trip Distribution Introduction, Basic considerations in Trip Distribution, P-A Matrix to O-D Matrix, Factors affecting trip distribution: Properties of transport network, spatial separation between various zones Growth factor methods-Uniform factor method, Average factor method, Detroit Method.	09
	Modal Split	
IV	Introduction; Influencing factors of mode choice; Types of modal split models- Trip end type and trip interchange type; Types of modal split models - Trip end type (Southern Wisconsin Model) and trip interchange type (Diversion curve model), Limitations, Aggregate and disaggregate models, advantages of disaggregate over aggregate modelling; Elements of choice decision process; Framework for the choice process of an individual Disaggregate mode choice models- Introduction, Utility theory, Probabilistic choice theory	06
	Traffic Assignment	
V	General, link cost function, Person-trips and vehicle Trips, diurnal patterns of demand, Trip directions Network properties: Link, nodes, characteristics of link (capacity, free flow speed, travel time, etc.), link flows, inter-zonal flows, Network connectivity, Minimum spanning tree, shortest path, etc.; Network Algorithms: Kruskal, Prims, Dijkstra, Floyd.	06
	Urban land use planning & Emerging trends in Transportation planning	
VI	Introduction; Urban land use planning- land use and land cover, land use classification; Land use transportation interaction; Accessibility and mobility, Land use models. Emerging Trends in Transportation planning: Activity based modelling; Spatial data infrastructure (SDI); Big Data analytics.	06

On successful completion of the course, the learners will be able to:

- **Differentiate** between the various hierarchical levels of Urban Transport Planning.
- **Discuss** the various stages involved in Urban Transportation Planning Process.
- Apply various techniques of Trip generation and distribution.
- **Compare** the types of modal split models.
- **Identify** the most suitable network algorithm based on the network properties.
- Classify land use and land cover models.

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- Know various resources required for construction works
- Know need of material management and its techniques
- Evaluate performance of construction machinery and its optimum use
- Understand importance of human resources in construction works
- Acquire skills of time-cost optimization of resources in construction projects
- Learn resources planning and scheduling with application of conventional and modern methods

	Details of Syllabus	
Module	Contents	Hrs
	Introduction	5
	1.1. Definition of resources, list of various resources, classification of	
	resources. Types of construction projects and their specific resource demand.	
I	1.2. Need of resources for construction of projects viz. tall buildings,	
1	tunneling, bridges, dams, water and sewage treatment plants, highways,	
	airports, pipelines for different utilities, docks and harbors, railways, metro	
	railways, sport grounds etc.	
	1.3. Case study of each category mentioned above.	
	1.4. Importance of site visits in resource planning	
II	Material Management	7
	2.1 Definition, objectives, importance of material management in modern	
	construction projects, role of material manager	
	2.2 Classification and codification of construction materials, Use of various	
	techniques viz. ABC, SDE, FSN, HML, VDE analysis	
	2.3 Planning of material requirement. methods of procuring, vendor analysis,	
	quotations, purchase procedures and legal issues.	
III	Inventory and Quality Control of Materials	7
	3.1. Techniques of inventory control, advantages and limitations of EOQ,	

	bulk ordering, periodic ordering. Safety stocks, stockout, just in time	
	Inventory management indices to assess effectiveness.	
	3.2. Receipts, storage and inspections. Means to control wastages and loss.	
	Site layout, and scheduling of resources to control wastages and loss.	
	3.3. Methods of quality control, quality assurance sampling techniques.	
	Quality management and economy, Use of material management systems,	
	application of software/s for planning procurement and inventory control.	
IV	Equipment Management	7
	4.1. Classification of construction equipment/s, working principles.	
	Productivity, output, and cost. Criteria of selection of equipment/s	
	4.2. Equipment balancing, cycle time, Number of equipment based on cycle	
	time, available time and magnitude of work. Hourly cost of operation per unit	
	item.	
	4.3. Log book, Repairer, maintenance, replacement of equipment/s	
	Human Resource Management	8
	5.1. Definition objectives and functions of HRM.	
	5.2. HR Planning- need, process, and requirements of HRP.	
\mathbf{v}	5.3. Staffing- Policy, skills, selection. Functions of personal manager.	
,	5.4. Training- quality, productivity, employee relationship. Contractors, sub-	
	contractors training. Performance appraisal, potential appraisal methods and	
	benefits.	
	5.5. Ethics in HRM, Trends and challenges in HRM.	
VI	Payments and Trade Unions	5
	6.1. Determination of wages, compensation, incentives, fringe benefits etc.	
	6.2. Industrial disputes, prevention, and resolution. Trade unions, roles and	
	responsibilities. Discipline in construction projects.	

On successful completion of the course, the learners will be able to:

- Explain the requirements of resources for construction projects
- Classify and code the procurement process of construction materials
- Describe the need of quality control of construction materials
- Compare construction equipment/s and their optimum use
- Estimate the need of recruitment of competent staff, their training and retention.
- Elaborate the roles and responsibilities of trade unions in industry

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- Demonstrate an ability to evaluate and/or design whole or parts of project, taking into account not only the financial and economic issues but also the social and environmental impacts affecting the sustainability of infrastructure.
- Promote an approach to project evaluation that is based on an appreciation of the needs of society, the potential for sustainable development, and recognition of the problems that may result from poorly conceived or poorly implemented projects and programs.
- Know methods, tools, and incentives for sustainable product-service system development
- Establish a clear understanding of the role and impact of various aspects of engineering and engineering decisions on environmental, societal and economic problem.
- Understand the role of engineering and technology within sustainable development.
- Have increased awareness among students in the areas of sustainability.

Detailed Syllabus					
Module	Sub-Modules/ Contents	Hrs			
I	Necessity and importance of sustainable construction materials. Material composition and properties, production, storage, distribution, testing, acceptance criteria, limitations of use, economic consideration, recent development related to the different materials to be studied.	06			
II	Various construction chemicals/admixtures, Fly ash and its use in concrete, Silica fume concrete, Self-compacting concrete, Fiber Reinforced plastics and concrete, Light weight concrete	06			

III	Crumb modified bitumen Rubber, Glenium Concrete, Materials used in nuclear-containment structures	06
IV	High performance concrete, Nano technology in cement concrete, Ferrocement Technology	06
V	Sustainability in the built environment: sustainable development relative to ecological, economic and social conditions – efforts in sustainable development and construction – international organizations involved. Ethics and sustainability: environmental and resource concerns – resource consumption by construction industry – Green building movement. Ecological design – concept – major contributions. Building assessment and eco labels – standards (LEED, GRIHA) – assessment structure and process. Green building design process – documentation requirements.	09
VI	Sustainable site and landscape – storm water management, heat island mitigation – assessment of sustainable sites. Building energy issues – building energy design strategy – building envelope – internal load reduction – energy optimization – renewable energy systems. Reducing carbon footprint. Built environment hydrologic cycle – water resources issues – strategies for conservation and recycling – waste water and storm water handling strategies. Materials resources – Life cycle assessment – embodied energy – Green building materials and products – assessing for environmental impacts – design for deconstruction – LEED credits for different aspects.	06

On successful completion of the course, the learners will be able to:

- Compare key features such as cost, ease of use, and building performance of different rating systems
- Evaluate rating systems in detail, including its evolution, objectives, criteria, levels of certification benefits, and shortcomings
- Demonstrate sustainable construction through case studies
- Apply the basic principles of sustainable construction on buildings by proposing solutions that advance sustainable building performance and applying existing tools of sustainable strategies to buildings
- Create written communications appropriate to the construction discipline through Social Media and/or Report deliverables and make informed personal decisions about activities and actions that would reflect sustainability of the built environment.
- Identify the fundamental concepts of energy and science of climate that defines Sustainable Construction techniques

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks

- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Recommended Books:

- 1) "Sustainable Building Design Manual Volume II", Published by TERI, New Delhi, 2004.
- 2) Concrete Technology by Neville
- 3) Construction Materials, Methods & Techniques(3e) by William P Spence, Yesdee Publication 2012, Pvt. Ltd., Chennai, India
- 4) Building Materials by M L Gambhir, Neha Jamwal, Tata McGraw Hill Publ.
- 5) Kibert, C. J., "Sustainable Construction: Green Building Design and Delivery", John Wiley & Sons, 2013.
- 6) Steven V. Szokolay., "Introduction to Architectural Science The Basis of Sustainable Design", Elsevier, 2007.
- 7) Sandy Halliday, "Sustainable Construction", Routledge, (Taylor & Francis Group), 2013.

- 1. To understand the characteristics of rural Society and the Scope, Nature and Constraints of rural Development

 2. To study Implications of 73rd CAA on Planning, Development and Governance of
- RuralAreas
- 3. An exploration of human values, which go into making a 'good' human being, a 'good' professional, a 'good' society and a 'good life' in the context of work life and the personal life of modern Indian professionals
- 4. To understand the Nature and Type of Human Values relevant to PlanningInstitutions

Module	Detailed Contents	Hrs.			
I	Introduction to Rural Development Meaning, nature and scope of development;	08			
	Nature of rural society in India; Hierarchy of settlements; Social, economic and				
	ecological constraints for rural development Roots of Rural Development in India				
	Rural reconstruction and Sarvodayaprogramme before independence; Impact of				
	voluntary effort and Sarvodaya Movement on rural development; Constitutional				
	direction, directive principles; Panchayati Raj - beginning of planning and				
	community				
	development; National extension services.				
II	Post-Independence rural Development Balwant Rai Mehta Committee - three tier	04			
	system of rural local Government; Need and scope for people's participation and				
	Panchayati Raj; Ashok Mehta Committee				
	- linkage between Panchayati Raj, participation and rural development.				
III	Rural Development Initiatives in Five Year Plans Five Year Plans and Rural	06			
	Development; Planning process at National, State, Regional and District levels;				
	Planning, development, implementing and monitoring organizations and agencies;				
	Urban and rural interface - integrated approach and local plans; Development				
	initiatives and their convergence; Special component plan and sub-plan for the				

	weaker section; Micro-eco zones; Data base for local planning; Need for decentralized planning; Sustainable rural development.	
IV	Post 73rd Amendment Scenario 73rd Constitution Amendment Act, including - XI schedule, devolution of powers, functions and finance; Panchayati Raj institutions - organizational linkages; Recent changes in rural local planning; Gram Sabha - revitalized Panchayati Raj; Institutionalization; resource mapping, resource mobilization including social mobilization; Information Technology and rural planning; Need for further amendments.	04
V	Values and Science and Technology Material development and its values; the challenge of science and technology; Values in planning profession, research and education. Types of Values Psychological values — integrated personality; mental health; Societal values — the modern search for a good society; justice, democracy, rule of law, values in the Indian constitution; Aesthetic values — perception and enjoyment of beauty; Moral and ethical values; nature of moral judgment; Spiritual values; different concepts; secular spirituality; Relative and absolute values; Human values— humanism and human values; human rights; human values as freedom, creativity, love and wisdom.	10
VI	Ethics Canons of ethics; ethics of virtue; ethics of duty; ethics of responsibility; Work ethics; Professional ethics; Ethics in planning profession, research and education	04

Outcomes: Learner will be able to...

- 1. Apply knowledge for RuralDevelopment.
- 2. Apply knowledge for ManagementIssues.
- 3. Apply knowledge for Initiatives and Strategies
- 4. Develop acumen for higher education andresearch.
- 5. Master the art of working in group of differentnature.
- 6. Develop confidence to take up rural project activities independently

Assessment:

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

Firsttestbasedonapproximately40% of contents and second testbased on remaining content s(approximately 40% but excluding contents covered in TestI)

End Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20marks
- 2. Question 1 will be compulsory and should cover maximum contents of thecurriculum
- 3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module3)
- 4. Only Four questions need to be solved

- To make students aware about the difference between listening and hearing
- To enhance speaking and technical writing skills.
- To prepare students to face interviews, group discussions.

Module	Description	Hrs
I	Listening Skills: Barriers to listening, Kinds of Listening & Note making.	02
П	Speaking Skills: Voice Modulation, Good Pronunciation, Speaking without fear, Extempore & Prepared speaking, Body Language, Telephone Etiquette/ Mobile /Video conferences. Presentation Skills: Planning, preparing, Organizing, Delivery, Feedback.	05
III	Reading Skills: SQ3R Reading Technique, Skimming and Scanning	03
IV	Writing Skills: Building Vocabulary, Effective Sentences & paragraphs, Organizational Techniques & patterns, Summarizing. Content writing: Social media post, blogs, LinkedIn Building Network Approach, articles and testimonials for websites Media tools: like surfer SEO tools, keyword planner, copywritely, HubSpot	10

	topic generator, Grammarly, QuillBot	
V	Types of Writing: Letters, memo, Reports/ Proposals/ Research Paper/ Conference Paper/ E-mails/Sharing Documents On-line.	04
VI	Interview: Pre-Interview Preparation, Interview Question Answer, Resume & Job Application, Group Discussion, Telephone Interviews.	03
IX	Seminar Presentation on the following Topics: (1) Time Management (2) Motivation (3) Negotiation & Conflict Management (4) Stress Management (5) IPR (6) Transactional Analysis (7) Leadership (8) Emotional Intelligence (EQ/IQ) (9) Assertiveness (10) Presentation Through Video conferences.	02

Contribution to Outcomes

Students will be able to:

- Differentiate between listening and hearing
- Develop speaking and technical writing skills
- Execute interviews, group discussions and presentation skill

Objectives:

- Prepare detailed project reports
- Perform statistical quality analysis
- Perform common material testing laboratory practicals
- Inspire self and others from watching motivational videos/lecture series related to team building/project management
- Use spreadsheet to solve complex civil engineering problems

Mod	Description	Hrs
ule		
I	Minimum two site visits to study construction techniques and use of major construction equipment associated with ongoing major construction works. Visit Report to be submitted in written form	16
II	Material testing laboratory: Two Tests destructive / non-destructive related with determination of various material properties related with construction. students are expected to write a detailed report on the same	04
III	Use of excel to perform statistical analysis in construction project management.	02
IV	Application of XLSTAT, SPSS and similar softwares used for simulation	02
V	Group discussion on two motivational videos of project management (could be movie clips, construction processes related to construction management)	02
VI	ONE assignment on each subject.	-

Contribution to Outcomes

On successful completion of the course, the learners will be able to:

- Observe very keenly various activities/processes going on at various construction sites and hence comment on how consistently they are performed and hence suggest improvement measures
- Write effective project reports highlighting the pros & cons of the technologies envisaged for the project
- Perform on-field tests to check the quality of materials/ technology used and hence draw inferences from the results thus obtained
- Apply spreadsheet (excel or other) tools to simplify complex civil engineering problems
- Demonstrate effective interpersonal soft skills w.r.t putting forwards one's viewpoint, group discussion, etc.
- Envisage the roles and responsibilities of a project manager on construction projects

- Understand the principles of economics and finance
- Prepare financial statements, Perform ratio analysis and comment on the financial stability of the firm
- Manage the working capital required on construction projects
- Analyze the impact of exchange rate fluctuations on infrastructure projects
- Employ capital budgeting methods to arrive at the best investment options
- Learn from case studies of financial successes and failures

	Detailed Syllabus				
Module	Sub Modules/Contents	Hrs			
I	Principles of Economics	10			
	1.1 Importance of the economic background to measurement, objectives				
	of business firm. Factors bearing on size of firms. Motives to growth.				
	Obstacles to growth of firms.				
	1.2 Accounting terminologies and recording process				
	1.3 The Companies Act, 1956				
	1.4 Preparation of balance sheet and Ratio Analysis.				
	1.5 Preparation of cash flow statement				
	1.6 Preparation of profit & loss account				
	1.7 Escrow Account for PPP Project.				

II	Capital 2.1 Need of working capital 2.2 Numericals on Estimation of requirements of working capital 2.3 Numericals on Credit Management, Cash Management, Managing payments to suppliers and out standings. 2.4 Numerical on exchange rate fluctuations on international projects	07
III	Economic Analysis 3.1 Cost implication to different forms of construction 3.2 Maintenance and replacement lives of construction projects 3.3 Installation and running cost of services 3.4 Capital investment in project 3.5 Cost analysis by traders and by functional elements 3.6 Cost control during design and Construction, 3.7 Depreciation and its calculation by various methods 3.8 Various Appraisal Criteria Methods, viz, Payback period, ARR, NPV, B/C and IRR. Numericals on the same 3.9 Break-even analysis: numericals 3.10 Project portfolio management	10
IV	Financial Planning 4.1 Long term finance planning, Sources of finance, Stock, Borrowings, Debentures, Loan Capital, Public Deposit, Dividend Policies, Bonus Shares, Market value of shares, Reserves & surplus, Role of financing institutes in Construction, ole of Lender's Engineer. 4.2 Venture Capital Financing- Indian Venture Capital scenario, SEBI regulations 4.3 Over and under capitalization with practical examples 4.4 World financial market 4.5 CIDC-ICRA grading of construction entities	04
V	Budget 5.1 Budgetary control system. Types of budgets, Procedure for master budgets. Budget manual 5.2 Numericals on preparation of production budget for a manufacturing company 5.3 Numericals on Preparation of cash budget 5.4 Numericals on Preparation of sales budget	04
VI	Case Studies 6.1 Konkan Railway Financial Appraisal or any Financial Appraisal of various sectors 6.2 Case studies for BOT, Dams, Mass Transit System, Infrastructure Projects Government Funded Projects with respect to a) Project Appraisal b) Raising of funds c) Cost to complete analysis	04

Course Outcomes

- Apply the basic principles of economics to construction entities
- Prepare financial statements
- Estimate the working capital required on a construction project

- Plan finance w.r.t. cash and credit required
- Perform capital budgeting and project portfolio analysis
- Appraise and criticize various Indian construction and infrastructure projects for their financial successes or failures.

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carries equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Objectives

Students will be able to:

- demonstrate the role of infrastructure in overall development of the nation.
- gain knowledge of various sectors of infrastructure & status of present progress.
- get acquainted with the knowledge of funding & managing infrastructure projects.
- •explain the concept of public private partnership & its implementation in practice.

DetailedSyllabus						
Module	Sub-Modules/Contents	Hrs				
	Development & Construction Industry					
I.	1.1 Concept of Development, Measures of Development, Determinants of Development					
	1.2Construction Industry: Global and Indian perspective	08				
	1.3Characteristics, scope and features of construction Industry in India					
	1.4Roles of various agencies involved in construction industry.					
	Infrastructure in India					
	2.1Classification of Infrastructure projects.					
	2.2Role of infrastructure in development of country					
II.	2.3Present status of various sectors of Infrastructure in India	08				
	Economics of Infrastructure Projects					
	3.1GDP & GNP					
III.	3.2Sources of financing infrastructure projects					
	3.3Role of Foreign Direct Investment (FDI) in Construction Industry					

	Public Private Partnership					
TX 7	4.1 Definition of PPP, Principle, purpose & role of partnership	0.5				
IV	4.2 Various PPP models involved in construction industry	05				
	4.3 Role and functions of PMC in Infrastructure projects					
	Issues related to Infrastructure Development					
	5.1Environmental clearances for special as well as mega projects					
	5.2Pre-requisites & documentation required for Infrastructure development					
V.	5.3Role of Federation of Indian Chambers of Commerce & Industry (FICCI)	06				
	Delay and Failures in Infrastructure projects					
	6.1Causes of delay in infrastructure projects.					
	6.2Cost over-run and Time over run	06				
VI.	6.3 Case study of TOR & COR					

Course Outcomes

Students will be able to,

- Explain the concept of development & significance of Construction Industry.
- Demonstrate the classification of infrastructure projects.
- Illustrate the economy measurement indicators such as GDP & GNP
- Differentiate amongst various PPP models & choose appropriate model for the particular execution
- Identify various issues related to Infrastructure development
- Explain various causes of Time Over run & Cost Over run

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

- To look at a practical problem through the perspective of Mathematics.
- To understand the various mathematical tools available at our hand.
- To analyze and apply the best suited mathematical model for getting feasible solution to our problem.
- To compare various mathematical model to decide upon the method giving optimum solution.
- To understand the similitude between mathematical models and real-life situations and identifying applications of Operation research on a continual basis.
- To apply Computer software and programming for solution of the mathematical models.

Detailed Syllabus							
Module	Sub-Modules/ Contents	Hrs					
I	Introduction Systems Approach: Introduction Systems Approach: Need of Systems Approach, Structure of the Mathematical Model, Limitations of Operations Research. Linear Programming: Difference between linear and non-linear programming, Linear Programming Problem (LPP), Primal-Dual Construction, Symmetric & Asymmetric Dual, Mathematical Formulation of LPP, Graphical method, Simplex Method.	15					

	Transportation Model: Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions — Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method. Assignment Model: Introduction, Mathematical Formulation of the Problem, Hungarian Method Algorithm, Processing of n Jobs Through Two Machines and m Machines, Graphical Method of Two Jobs m Machines Problem Routing Problem, Travelling Salesman Problem.	
	Queuing Models & Simulation	
п	Queuing systems and structures, single server and multi-server models, Poisson input, exponential service, constant rate service, finite and infinite population. Basic Concepts in Simulation, Methodology of Simulation, Introduction & Application of Monte-Carlo Method; Advantages, Limitations & Applications of Simulation.	05
	Introduction to Soft Computing	
III	Applications of Fuzzy logic, Artificial Neural Network, Neuro-fuzzy optimization, Genetic Algorithm, Genetic Programming, Particle Swarm Optimization, etc. in civil engineering.	05
	Dynamic programming	
IV	Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems.	05
	Game Theory	
V	Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, Value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.	05
	Integer Programming	
VI	Types of Integer Programming Problems, Gomory's cutting plane Algorithm, Branch & Bound Technique. Introduction to Decomposition algorithms.	04

Course Outcomes

- Formulate a mathematical model for a given complex problem.
- Solve linear programming problems using various models.
- **Apply** queuing model & simulations for prediction of civil engineering system outcomes
- Usesoft computing for solving civil engineering problems
- Compare various strategies using Game theory.
- **Refine** the solution using integer programming.

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carries equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Recommended Books:

- Taha, H.A. "Operations Research An Introduction", Prentice Hall, (7th Edition), 2002.
- Ravindran, A, Phillips, D. T and Solberg, J. J. "Operations Research: Principles & Practice", John Willey and Sons, 2nd Edition, 2009.
- Hiller, F. S. and Liebermann, G. J. "Introduction to Operations Research", Tata McGraw Hill, 2002.
- Sharma S.D. "Operations Research", KedarNath Ram Nath-Meerut.

- Electrical system and lighting systems in buildings Water distribution and drainage systems, piped gas supply systems, fire-fighting installations, Mechanical systems in buildings
- Deterioration of concrete structures & distress identification
- Repair materials and techniques
- Seismic retrofitting and maintenance of heritage structures

Detailed Syllabus				
Module		Course Module / Contents	Hrs	
	Elec	trical system and lighting systems in buildings		
I	1.1	electrical systems in buildings, indoor and outdoor lighting systems, electrical layout plan, wiring system, Single and three phase supply, distribution boards, various electrical appliances, ISI specifications, electrical load calculation. Protective devices, Solar energy and panels Principles of Illumination Design: Visual task, Modern theory of light &color: classification of lighting, artificial lights sources, Lighting for various buildings like offices, school, hospitals and house	07	
	Wate	er Distribution and drainage systems, piped gas supply systems fire-		
	fight	ing installations,		
II	2.1	Water Distribution system: Material used, pipes & connections, Water	08	
11	2.1	meter, valves and storage tanks,	08	
	2.2	Drainage system: system of plumbing, house drainage plans Pipe and		
	2.2	traps, Chambers- gradient and spacing, manholes, septic tanks, rain water		

		harvesting system.	
	2.3	piped gas supply systems, materials, connections, standards	
	2.4	Fire safety, fire-fighting systems	
	Mec	hanical systems in buildings	
Ш	3.1	Motors, Generators, Pumps, HVAC Systems, capacity, components and working, maintenance.	06
	3.2	Lifts, escalators, their components, working and maintenance.	
	Dete	rioration of Concrete Structures & Distress identification	
	4.1	Need for strengthening due to various reasons, Causes of distress in concrete structures - holistic models for deterioration of concrete.	
IV	4.2	Distress identification and testing methods, structural audit and different stages, field and laboratory testing.	07
	4.3	Non-Destructive and Destructive Testing Methods: - Concrete strength assessment and tests, interpretation and evaluation of results,	
	Repa	air Materials and techniques	
V	5.1	Selection of various repair materials and their essential parameters, identification of suitable repair strategy. machines/instruments required.	06
	5.2	Rehabilitation and retrofitting methods, selection of repair methods. Jacketing methods,	
	Seis	mic retrofitting and Maintenance of Heritage Structures	
VI	6.1	Effects of earthquakes and factors related to building damages due to earthquake, Methods of seismic retrofitting, restoration of buildings	05
	6.2	Repair and rehabilitation of heritage structures	

Course Outcomes

On successful completion of the course, the learners will be able to:

- Describe the electrical system and lighting systems in buildings
- Explain water distribution and drainage systems, piped gas supply systems, fire-fighting systems.
- Explain mechanical systems in buildings
- Identify causes for deterioration of structures & evaluate them
- Explain repair materials and techniques
- Describe seismic retrofitting and maintenance of heritage structures

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

- Develop a thorough understanding of project pre-planning and importance of defining the scope of the project and setting benchmarks well in advance
- Highlight the advantages of project partnering
- Appraise the importance of SCM & CCM in construction sector
- Perform S.W.O.T analysis of construction entities
- Apply lean construction techniques to construction projects
- Appraise the leadership styles and motivations necessary on construction projects

	Detailed Syllabus	
Module	Sub modules / contents	Hrs
I	Project pre-planning 1.1 Project Influence cost diagram. Definition & selecting of pre-planning team design. 1.2 Defining project scope and setting benchmarks and documenting them well in advance 1.3 Evaluation of alternatives. Decision whether to invest in project or not. Problems on the same 1.4 Concept of PDRI— Project definition rating index. PDRI for residential and industrial buildings. Utility of PDRI with respect to benchmarking	06
II	 1.5 Any case study on construction Project preplanning. Project partnering 2.1 Definition; partnering as an effective risk sharing mechanism, partnering charter, partnering workshop. 2.2 Advantages of partnering; role in preventing construction disputes 	04

	2.3 Critical success factors for implementation	
	2.4 Any case study on project partnering.	
III	 S. W. O. T. analysis 3.1 Practical Application of S.W.O.T Analysis in the Management of a Construction Project 3.2 S.W.O.T. matrix- utility and advantage on strategic planning and management. 3.3 S.W.O.T Analysis of Indian construction industry and infrastructure projects 	04
	3.4 Any Case study on S.W.O.T analysis on construction project	
IV	Supply Chain Management (SCM) & Critical Chain Management (CCM) 4.1 Concept of Supplier and customer in context of ISO 4.2 Identifying the chain associated connecting various processes between the supplier and the customer in context of construction projects 4.3 Management strategy for implementing S. S. C. M. in construction organizations and on construction projects 4.4 Benefits of S. C. M 4.5 Case Study on S.C.M in the construction sector 4.6 Concept of critical chain in construction projects based on the theory of constraints. 4.7 Developing critical chain plans for a single project and multiple projects. 4.8 Measuring, monitoring and controlling the critical chain. 4.9 Advantages of CCM.	06
V	Lean construction Techniques 5.1 Lean Construction – concepts, development, objectives and practical applications 5.2 Definitions - lean, value, waste, pull, flow 5.3 Differences between LC and project management approaches 5.4 Integrated Project Delivery (ILPD) & Integrated Lean Project Delivery (ILPD) 5.5 Last Planner System (LPS) 5.6 Target Value Design (TVD) 5.7 Building Information Modeling (BIM) 5.8 5s, Six sigma and Visual Management 5.9 Just in Time (JIT) 5.10 Standardized work and continuous improvement 5.11 Repetitive, look ahead and pull/push scheduling	10

VI	Leadership styles and motivation	
	6.1 Qualities of a leader, difference between leader and manager	
	6.2 Maslow's Hierarchy of Needs	
	6.3 Alderfer's ERG Theory	
	6.4 McClelland's Theory of Needs	09
	6.5 Participatory leadership and factors affecting leadership	09
	6.6 Various Leadership Styles	
	6.7 Emotional & Spiritual intelligence and their quotients	
	6.8 Transformational and Transactional leadership	
	6.9 Seven habits of highly effective people and the 8 th habit	

Course Outcomes

On successful completion of the course, the learners will be able to:

- Appreciate the benefits of pre-project planning, scope definition and setting benchmarks, Perform design PDRI for particular projects
- Highlight the advantages of project partnership
- Perform SWOT analysis for a construction firm
- Appraise the role of an efficient Supply Chain Management (SCM) & Critical Chain Management (CCM) for the successful completion of infrastructure and construction projects
- Apply lean construction techniques to construction processes
- Demonstrate leadership styles and motivation techniques on construction projects

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

- Trigger academic excellence on par with international standards
- Fetch attitudinal changes in students towards work and shape them as task completers for successful employable adults in geospatial technology.
- Mould students as responsible citizens with knowledge, intellect, personal, social and cultural perception in solving geospatial problems.
- Capacity building by training the students with practical knowledge and executable solutions to ever-growing Geo-spatial Problems and
- Motivate the undergraduate students of all science and engineering disciplines to use Geoinformation Technology for solving the problems relevant to their own disciplines

Detailed Syllabus					
Module	Subject Module / Content	Hrs			
I	Remote Sensing	07			
	Physics of remote sensing, ideal remote sensing system orbital and sensor characteristics of major earth resource satellites, Electromagnetic spectrum – wavelength regions important to remote sensing, Atmospheric scattering, Atmospheric windows, Spectral signature concepts – typical spectral reflective characteristics of water, vegetation, and soil, Types of platforms – orbit types, Sun-synchronous and Geosynchronous – Passive and Active sensors, Introduction to spatial resolution, spectral resolution, radiometric resolution, and temporal resolution,, Elements of remote sensing for visual interpretation				

	viz. tone, shape, size, pattern, texture, shadow, and association.	
II	Digital Image Processing:	06
	Digital / Satellite image, Image histogram, Introduction to image rectification, digital image processing, preprocessing and post-processing, Image registration, image enhancement, image transformations, Digital image classification (supervised & unsupervised). Digital elevation model (DEM) and its derivatives, triangular irregular network model (TIN), and other models & their applications	
II	Geographical Information System (GIS)	07
	Basic component, Objectives, Advantages, Basic components, and Functions of GIS. Spatial and non-spatial information, GIS data types - Vector and Raster data. Points, lines, and areas features. Manpower for GIS - Roles and responsibilities of Project Manager, Database Manager, digital map maker, system operator, and programmer Parameters for success and failure of GIS, GIS data types and data representation, data acquisition, geo-referencing of data, raster and vector data, attribute data models and its types, Digitizer and scanners. Commercially available GIS hardware and Software (Various opensource and closed-source)	
III	Global Positioning System (G.P.S) and Global Navigation Satellite System (G.N.S.S.)	06
	G.P.S. Segments: Spaces Segment, Control Segment, User Segment Features of G.P.S. Satellites. Absolute Positioning, Relative Positioning, differential G.P.S., Kinematics of G.P.S. G.P.S. Receivers: Navigational Receivers, Surveying Receivers, Geodetic Receivers. Introduction to GNSS and Types, IRNSS, GPS, GPS components, D Differential GPS, types of GPS tracking, Application of GNSS in surveying, Mapping and navigation	
V	Remote Sensing and GIS Applications in Civil Infrastructure Management	07
	Remote Sensing Applications in Disaster Management, Flood mapping, Drought assessment, Environmental monitoring, other Civil Engineering applications. GIS Applications in planning and database management in civil infrastructure, in Environmental & Water Resource Management., Underground infrastructure Management., Green infrastructure Management., in Transportation infrastructure management-Intelligent Transport System, Urban Transport Planning, Highway Alignment, Traffic Congestion analysis and Accident Studies, Road Network Planning.	
VI	Case studies:	06
	Application in land measurement work for land record department, Applications of land use and land cover pattern, Application in urban planning, Application in smart cities planning and development	

Course Outcomes

On successful completion of the course, the learners will be able to:

- Explain remote sensing and spatial data from satellite imagery.
- Gain expertise of various digital image processing.
- Acquire knowledge of GIS and various GIS software packages
- Use GPS and GNSS for gathering geo-spatial data
- Apply Remote Sensing and GIS for solving civil engineering problems

Assessment:

Internal:

Assessment consists of two tests out of which; one should be a compulsory class test and the other is either a class test or assignment on live problems or course projects.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question, the paper weightage of each module will be proportional to the number of respective lecture hours as mentioned in the syllabus,

- I. Question paper will comprise of total of six-question
- 2. All questions carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

Recommended books & Journals:

- 1. Fundamentals of Remote Sensing, George Joseph and C Jeganathan, University Press.
- 2. Concepts and Techniques of Geographical Information System, Lo C.P.Yeung A K, Prentice India
- 3. Introduction to Geographical Information system, Kang-Tsung Chang, Tata McGraw Hill
- 4. international and National Journals on GIS and GPS
- 5. GIS A Management, Perspent-t Stan Aronof'f, WDL Publisher.
- 6. Peter A Burrough Rachael A Mc Donnel, "Principles of GIS" (Oxford), 2000'
- 7. Christopher Jones, "GIS and Computer cartography" (Longman), 2000

- To study and understand the latest construction techniques applied to engineering construction for sub structure.
- To summarize the students about various techniques of super structure construction.
- To give an experience in the implementation of new technology concepts which are applied in field of advanced construction in special structures.
- Know the different methods of some advanced construction techniques and ground improvement techniques.
- To present the new technology related to dredging system and its concepts related advanced construction technology.
- To study different methods of Rehabilitation and strengthening in construction to successfully achieve the structural design.

Detailed Syllabus							
Module		Course Module / Contents					
	Sub	Structure Construction					
	1.1	Box jacking, Pipe jacking, Underwater drilling, blasting, and concreting. Underwater construction of diaphragm walls and					
т		basement	06				
1	1.2	Driving well and caisson, sinking cofferdam, cable anchoring, and grouting. Driving diaphragm walls, sheet piles	00				
	1.3	Laying operations for built-up offshore system, Shoring for deep cutting, large reservoir construction, and well points. Dewatering for					

		underground open excavation.				
	Sup	er Structure Construction for building				
	2.1	Vacuum dewatering of concrete flooring, Concrete paving technology				
п	2.2	Techniques of construction for continuous concreting operation in tall buildings of various shapes and varying sections, Erection techniques of tall structures, large span structures, launching techniques for heavy decks, in-situ prestressing in high rise structures, post-tensioning of the slab, aerial transporting, Handling, and erecting lightweight components on tall structures	06			
	Con	struction of Special Structures				
Ш	3.1	Erection of lattice towers - Rigging of transmission line structures, Construction sequence in cooling towers, Silos, chimneys, skyscrapers. Construction sequence and methods in domes, Support structure for heavy equipment and machinery in heavy industries, Erection of articulated structures and space decks.	06			
	3.2	Roof truss: erection problems Building / Industrial component, Equipment and tackles used for erecting these. Plate girder Launching a portion of bridge girder, large span lattice girder. Erection of chimney, Erection of overhead tank.				
	Advancement in Construction techniques					
	4.1	Building construction techniques: Zero energy building, green building, pre-engineering building, Solar Paints, Building Integrated Photovoltaic (BIPV), Earthquake Resisting Controls-Isolation and Dissipation.				
IV	4.2	Coastal construction techniques: Sound Proofing walls, water-resistant roofs, high-performance doors and windows, air and moisture barriers.	08			
	4.3	Road construction techniques: 3D Printing, Road Printer, smart roads				
	4.4	Ground improvement techniques: Advanced piling techniques - Stone Column, Vibro Floatation, Grouting, Geotextile application, Micro Piles, and Soil Nailing. Vertical drains-Sand Drains, Pre-Fabricated Vertical Drains. Thermal Methods- soil heating and soil freezing.				
	Dred	dging				
v	5.1	Dredging System, Mechanism, Hydraulic dredger in waves, dredging equipment, Water & Booster System, dredging in the navigation system, Agitation dredging system, silt dredging system, water injection system, Pneumatic dredging system, Amphibious & scrapper dredging system. Advantages & Disadvantages of Various Dredging Systems,	06			
		Production Cycle for Dredgers, Application, Capacity of dredgers, & its economical use, dredging economics				

VI Seismic retrofitting, strengthening of beams, strengthening of columns, strengthening of the slab, strengthening of a masonry wall, Protection methods of structures, Mud jacking and grouting for foundation, Micro piling and underpinning for strengthening floor and shallow profile, Subgrade waterproofing, Soil Stabilization techniques 6.2 Repair of steel structures, bridge, building, towers etc., monuments and historical structures. Prevention of water leakage in structures;		
6.2 Repair of steel structures, bridge, building, towers etc., monuments and historical structures. Prevention of water leakage in structures;	VI	07
Underwater repair; Durability of repairing material. Maintenance of underground railways.		

Course Outcomes

On successful completion of the course, the learners will be able to:

- Explain the procedure of construction techniques for sub structure of major civil engineering projects.
- Gain knowledge of various stages of construction of super structure of major civil engineering projects.
- Demonstrate the Implementation of new construction technology on engineering concepts which are applied in field Advanced construction technology in special structures.
- Illustrate the different methods of advancement in construction techniques and ground improvement techniques.
- Describe various dredging systems for major civil engineering projects.
- Apply the theoretical and practical aspects of rehabilitation and strengthening techniques in civil engineering along with the design and management applications

Assessment:

Internal:

Assessment consists of two tests out of which; one should be a compulsory class test and the other is either a class test or assignment on live problems or course projects.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question, the paper weightage of each module will be proportional to the number of respective lecture hours as mentioned in the syllabus,

Module	Subject Module / Content	Hrs				
I	Quality Management	08				
	1.1 Introduction to Quality Management 1.2 objectives of Quality Management 1.3 Factor influencing construction quality. 1.4 Quality plan, Quality Management Guidelines & Quality circles 1.5 Concept of Quality Audit 1.6 Importance of Quality Control in Construction 1.7 Measure taken for Improving Quality of Construction 1.8 Challenges faced on Construction project due to Globalization					
П	Quality Systems	06				

III	2.1 Introduction to Quality systems 2.2 ISO 9000 family of standards & requirements. 2.3 Quality System Documents 2.4 Quality oriented training. 2.5 Bench-marking quality. 2.6 Design of Quality manuals Quality Assurance and Control 3.1 Difference between Quality Control and Quality assurance. 3.2 Necessity of QA/QC. 3.3 Techniques and needs of QA/QC 3.4 Different aspects of quality.	07
	3.5 Factors influencing construction quality.	
IV	Introduction to risk management	06
	 4.1 Importance of risk, development of risk management system 4.2 Identifying risk events, cost of risk, types of risk and classification 4.3 Benefits of risk management, responsibilities of agencies involved in risk management 4.4 Risk management standards, decision making strategies effects of tax laws, government rulings, conflict resolution. money, time and technical risks 4.5 Risks in the context of global project teams 4.6 Problems related to natural disasters or unusual events like earthquakes, fires, accidents 	
V	Risk Analysis Techniques	07
	 5.1 Sensitivity analysis 5.2 Uncertainty, cost factors and benefit factors 5.3 Scenario analysis, scenario analysis simulation 5.4 Decision tree analysis, risk profile method, certainly equivalent method, risk adjusted discount rate method, certainty index method, 3 point estimated method 5.5 Use of risk prompts, use of risk assessment tables, details of RAMP process, utility of grading of construction entities for reliable risk assessment 5.6 Entrepreneurial risks, pure risks 5.7 Contract review and legal conflicts 	
VI	Risk Mitigation	05
	6.1 Risk Mitigation methods such as by elimination, reducing, transferring, avoiding, absorbing or pooling 6.2 Residual risk, mitigation of unqualified risk	

Course Outcomes

On successful completion of the course, the learners will be able to:

- Demonstrate Quality management guidelines
- Apply Quality Systems in construction Practices

- Describe the concept of Quality Control & Quality Manual
- Classify various types of risk applicable to Construction Projects
- Apply knowledge of Risk analysis techniques in mitigation process
- Implement appropriate method of Risk Mitigation in construction practices

Assessment:

Internal:

Assessment consists of two tests out of which; one should be a compulsory class test and the other is either a class test or assignment on live problems or course projects.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question, the paper weightage of each module will be proportional to the number of respective lecture hours as mentioned in the syllabus,

- I. Question paper will comprise o[total of six-question
- 2. All questions carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

Recommended books & Journals:

- $To understand in tellectual property rights protection system \\ To promote the knowledge of Intellectual Property Laws of India as well as International treaty proced$
- Togetacquaintancewith Patentsearchandpatent filingprocedureandapplications

Module	DetailedContents	Hr
01	Introduction to Intellectual Property Rights (IPR): Meaning of IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Plantvariety protection, Geographical indications, Transfer of technology etc. Importance of IPR in Modern Global Economic Environment: Theories of IPR, Philosophical aspects of IPR laws, Needfor IPR, IPR as an instrument of development	05
02	EnforcementofIntellectualPropertyRights:Introduction,Magnitudeofproblem,Fac torsthatcreateandsustaincounterfeiting/piracy,Internationalagreements,Internationalo rganizations(e.g.WIPO,WTO)activeinIPRenforcement Indian Scenario of IPR:Introduction, History ofIPR inIndia, Overview ofIPlaws in India, Indian IPR, Administrative Machinery, Major international treatiessignedbyIndia,ProcedureforsubmittingpatentandEnforcementofIPRat nationalleveletc.	07
03	EmergingIssuesinIPR: ChallengesforIPindigitaleconomy,e-commerce, humangenome, biodiversityand traditional knowledgeetc.	05
04	Basics ofPatents: Definition of Patents, Conditions of patentability, Patentable and non-patentable inventions, Types of patentapplications (e.g. Patento fadditionetc), Process Patentand Product Patent, Precautions while patenting, Patents pecification	07

	Patentclaims, Disclosures and non-disclosures, Patentrights and infringement,						
	Methodofgetting apatent						
	PatentRules: Indianpatentact, Europeanscenario, US scenario, Australia						
05	scenario, Japanscenario, Chinesescenario, Multilateral treaties where Indiais amember (T						
	RIPS agreement, Paris convention etc.)						
	Procedure for Filing a Patent (National and International):Legislation						
	and Salient Features, Patent Search, Drafting and Filing Patent Applications,						
06	Processingof patent, Patent Litigation, Patent Publication etc, Time frame and cost,						
	PatentLicensing,PatentInfringement						
	Patentdatabases: Importantwebsites, Searchinginternational databases						

Outcomes:

Studentswillbeable to...

- understand IntellectualPropertyassets
- assistindividuals andorganizations in capacity building
- workfor development,promotion,protection,compliance,andenforcementofIntellectualPropertyandPatent

Assessment:

Internal:

Assessmentconsistsoftwotestsoutofwhich; one should be compulsory class test and the other is either a class test or at least 6 assignment on complete syllabus or course project.

EndSemesterTheoryExamination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in questionpapers of end semester examination. In question paper weightage of each module will be proportional tonumberofrespectivelecturehours asmentionin thesyllabus.

- 1. Questionpaperwillcompriseoftotalsixquestion
- 2. Allquestion carryequalmarks
- 3. Questionswillbemixedinnature(forexamplesupposedQ.2haspart(a)frommodule3thenpart (b)will befrom anymodule other than module3)
- 4. OnlyFourquestion needtobe solved.

Objectives:

- Understandandidentifyenvironmentalissuesrelevantto India and globalconcerns
- Learnconceptsofecology
- Familiarizeenvironmentrelatedlegislations

Module	DetailedContents	Hrs							
I	Introduction and Definition of Environment: Significance of EnvironmentManagementfor contemporarymanagers, Careeropportunities.	10							
	EnvironmentalissuesrelevanttoIndia,SustainableDevelopment,TheEnergy scenario.								
II	GlobalEnvironmentalconcerns :GlobalWarming,AcidRain,OzoneDepletion,Hazardous Wastes, Endangered life- species, Loss of Biodiversity,Industrial/Man-madedisasters, Atomic/Biomedical hazards, etc.	06							
III	ConceptsofEcology:Ecosystemsandinterdependencebetweenlivingorganisms, habitats,limitingfactors,carryingcapacity,foodchain,etc.								
IV	ScopeofEnvironmentManagement,Role&functionsofGovernmentasaplanningandregul atingagency. EnvironmentQualityManagement andCorporateEnvironmental Responsibility								
V	TotalQualityEnvironmentalManagement,ISO-14000,EMScertification.	05							
VI	General overview of major legislations like Environment Protection Act, Air (P & CP) Act, Water (P & CP) Act, Wildlife Protection Act, Forest Act, Factories Act, etc.	03							

ContributiontoOutcomes

Studentswillbeable to...

- Understandthe conceptofenvironmentalmanagement
- Understandecosystemandinterdependence, foodchainetc.
- Understandandinterpret environmentrelatedlegislations

Assessment:

Internal:

Assessmentconsistsoftwotestsoutofwhich; one should be compulsory class test and the other is either acl asstest or assignment on live problems or course project.

EndSemesterTheoryExamination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in questionpapers of end semester examination. In question paper weightage of each module will be proportional tonumberofrespectivelecturehours asmentionin thesyllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

- Apply spreadsheet (excel or other) tools to simplify complex civil engineering problems
- Prepare site visit reports
- Administer incentive schemes and devise training programs for construction managers
- Valuate civil engineering structure
- Read tender notices/contract documents and extract information from it
- Formulate the conditions of contract for a particular project
- Write technical papers in reputed journals
- Summarizes technical articles

Module	Description	Hrs
I	Minimum two site visits to study the feasibility aspects, tendering procedures, accounting systems, funds raising and other financial management aspects, billing procedures etc. associated with on-going major construction work-visit report to be submitted	16
II	Use of spread sheet and data base application software for performing various functions of civil engineers as mentioned below is to be demonstrated • Quantity Estimation • Rate Analysis • Bid preparation • Material and supplier information • Employee / equipment information etc.	04
III	Collection and study of tender notices, tender documents of contract document associated with Civil Engineering works. Exercise on contract document associated with Civil Engineering works.	02
IV	Exercise on Valuation: Valuation of land and building using various methods report to be submitted on prescribed format	02
V	Preparation of training program for site engineers based on competency mapping and training needs assessment	02
VI	Summarizing two articles related to construction engineering and	02

	management from reputed technical journals	
VII	One Assignment related to each subject	-

Contribution to Outcomes

Students will be able to:

- Write effective project reports highlighting the pros & cons of the technologies envisaged for the project
- Apply spreadsheet (excel or other) tools to simplify complex civil engineering problems
- Administer incentive schemes based on the contribution of employee to previous projects and bridging gaps by devising training programs for construction managers by identifying their competency gaps
- Perform Valuation using various methods and arrive at actual present value of a civil engineering structure
- Read tender notices/contract documents and extract information from it and formulate the conditions of contract for a particular project
- Summarize technical articles and write technical papers in reputed journals

Students will be able to:

- Understand the Concept Computerized Project management
- Study the Various Project management Software used in Construction Project
- Study Planning and managing database of Construction Project using Software

Module	Description	Hrs
I	Computerized Project Management: Introduction to Concepts of Advanced Construction Management using Softwares. Application and Case studies.	03
II	Project management using MS-Project Software: Real Estate Project Residential or Commercial building Project etc.	06
III	Advanced Project Management using Primavera Software: Infrastructure Projects (Hi-Rise Structure/Transportation Infrastructure/Hydropower Project etc.)	10
IV	GIS Software for Project Management (Gram++, Arc GIS, Q-GIS etc.): Applications of GIS software in Construction Database Management & Mapping.	10
V	Building Information Modeling (BIM-Software) REVIT, TEKLA etc.: Building information Modeling (BIM) & Revit Software in Construction Project.	10

Term Work: At least one Project Assignment must be prepared with the help of mentionedsoftwares to Submit for Term work

Contribution to Outcomes

On successful completion of the course, the learners will be able to:

- Explain Concept of Computerized Project management.
- Apply Project management Software (MS-Project) for Planning of Building Projects.
- Apply Advanced Project management Software (Primavera) for Planning of Infrastructure Projects.
- Execute the Planning and managing database of Construction Project using GIS Software.
- Illustrate the Principles of Building information Modeling (BIM) Software in Construction Project.

Recommended Books & Journal

- 1) Computerized Project Management Manual
- 2) MS-Project Software & Manual
- 3) Primavera Software & Manual
- 4) BIM & REVIT Software & manual
- 5) Arc GIS, Q-GIS, Gramm++ Software & Manual
- 6) Open Source Project Management Software
